

Tech Bulletin: FSM Mobile Compatibility Issues with Android OS 14

FSM Mobile Compatibility Issues with Android OS 14

Hello,

With the recent release of OS v14 for Android, some users may be experiencing issues using the FSM Mobile app on their devices. At this time, FMS Mobile is not compatible with Android OS v14.

To check what OS version your Android device is on, please refer to this [article from Google](#).

For Android users who are on OS v14, we recommend using either [FSM Lite](#) or [Viasat Tech Tools \(VTT\)](#).

For iPhone users, there are no changes to app compatibility and everything should be working as usual.
