

Tech Bulletin: New mounting option

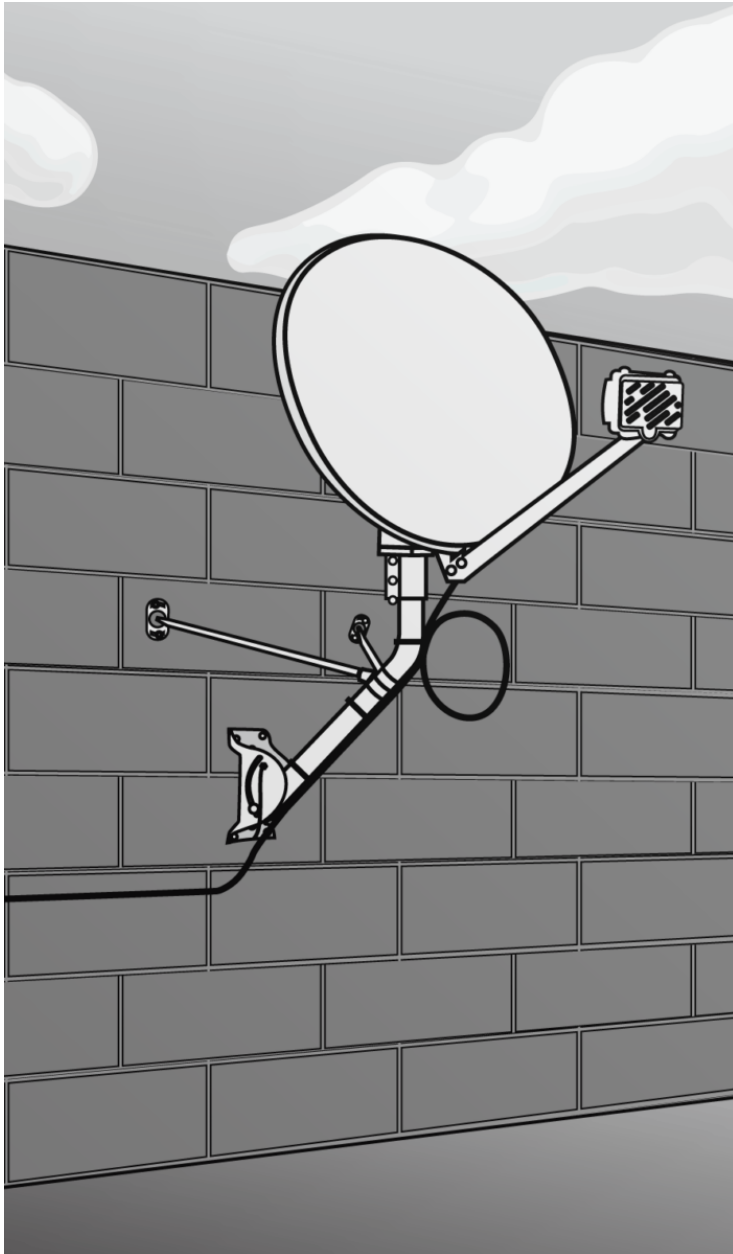

New mounting option

Hello,

We are happy to share a recently approved mounting option!

A structurally solid freestanding poured concrete or concrete block wall is now an approved surface. This installation is still required to meet all concrete block wall mount specifications. Freestanding poured concrete and concrete block walls with decay are not approved mounting surfaces.

The installation steps and specifications are available at <https://eguide.field.viasat.com/brick-block-or-poured-concrete-wall-mount-job-aid/>.
