

Tech Bulletin: Viasat Tech Tools Work Order “Complete” Process

Viasat Techs Tools Work Order “Complete” Process

Starting at the end of September, following the FSM version 5 migration, technicians are required to Status and Complete **all** work order types using Viasat Tech Tools.

Install/Upgrade work orders will no longer “Complete” automatically upon activation, and technicians **must** manually complete the work order closure process.

If the work order closure screen is skipped, technicians can select “complete” on the **Status** bar within the work order details.

Important:

- To prevent order processing delays, ensure all Viasat work orders are marked as “Complete” while onsite.
- **Do not** leave work orders in a “Past Open” or “On Site” status.
